StudentWatch Case Study

StudentWatch brought more organization and safety awareness to staff and students, while also helping the district see a reduction in the number of insurance claims.

Automating Student Accident Management
Vandalia-Butler City Schools

The Challenge

District Overview

Buildings:	6
Staff:	426
Students:	3,344

For Business Manager, Chuck Stewart, important student accident paperwork became hard to track, manage, and complete. Each year he was tasked with keeping track of student accidents occurring on school grounds, all by using a paper and pen process. In addition, Stewart was tasked with the responsibility of evaluating data to prevent future accidents. With no easy way to analyze the accidents taking place, Stewart was constantly chasing people and paperwork at multiple buildings which made it difficult to organize and deal with prevention initiatives and ensure that they were being handled by the appropriate person and in a timely manner.

"It was a very difficult task to track all of the student incidents and where they were occurring," said Stewart. "The amount of paperwork filed when accidents occurred and the time required to locate and mobilize the appropriate individuals to manage the accident to completion was taking up a huge amount of my time."

The Solution

"The StudentWatch Suite is creating a safer school environment for our staff and students while saving our district money. Making the move to PublicSchoolWORKS was the best choice for our district, and it keeps getting better."

Chuck Stewart,
Business Manager ,
Vandalia-Butler City Schools

When Vandalia-Butler City Schools implemented PublicSchoolWORKS' StudentWatch Suite, all of their student accident reporting was handled automatically through PublicSchoolWORKS' online management tools. With the student accident management system, administrators are automatically notified to get involved. The time and date-stamps key accident information to protect the district, and provides data to reduce the chance of future incidents. This allowed Stewart to focus on the business of education.

"The system is managing every report, notifying the appropriate person to intervene and tracking the report to completion to ensure that nothing is falling through the cracks," said Stewart. "The StudentWatch Suite completely eliminates paper tracking which has saved valuable administrative time and money."

The Benefits

"All activities within the StudentWatch Suite are handled through auto notifications and tracked to completion," said Stewart. Reporting tools allow the district to see trends in accidents for students and automation mobilizes key staff to ensuring timely and proper documentation.

The Results

The administration at Vandalia-Butler City Schools has found the online capabilities of PublicSchoolWORKS' StudentWatch Suite to be extremely valuable. The Suite's ability to auto-notify administration of problem areas has created a safer school environment, in addition to bringing more organization and awareness to staff and students. In addition, the district has seen reductions in insurance claims.
